Hi Joe,

Nice catching up with you last night at the open house. Here's what I found out about the soil borings (below). If there are any concerns about the site conditions please let me know.

Thanks!

Yes we completed the boring (CC-031) on March 1st at the Hinesburg parcel. Good to hear there were no complaints.

We had no issues getting onto the boring, and since the ground still had some frost, the rig didn't leave any tracks in grassed areas. We re-wired the barbed wire fence we cut, and raked the areas of the gravel parking lot where we off-loaded and loaded the rig.

If he is interesting in the soil conditions we encountered gray soft clay underlying fine sand and silt and topsoil. The soft clay was present to 21 feet below the ground surface where we terminated the boring.

Thanks for your help in coordinated access with the town, and hopefully we left the site in good condition (I believe we did) and to the town's approval.
